Rubric of assessment for Midterm Essay

Course: Introduction to Digital Image Processing (505060)

Criteria content	**Rating scale**	**1**	**2**	**3**
	Points /10			
1/ Programming part	**7.0**			
Correctly detected circular traffic signs (totally 24 circular signs in 02 videos)	3.0	$\frac{\text{Number of correctly detected circular traffic signs}}{24} \times 3.0$		
Stable and unique detections (from far to near distance)	3.0	$\frac{\text{Number of Stable and unique detections}}{24} \times 3.0$		
		A penalty of **-0.25** points will be applied for every redundant detection that intersects with a traffic sign.		
Redundant detections (not related to traffic signs)	1.0	0 point Number of redundant detections > 10	0.5 point Number of redundant detections > 4 Number of redundant detections < 11	1 point Number of redundant detections < 5
2/ Report part	**3.0**			
Chapter 1				
Main programming steps	2.5	0 ~ 0.5 points Content and format have more than 80% wrong or unclear parts.	0.5 ~ 1.5 points Content and format have from 20% to 80% wrong or unclear parts.	1.5 ~ 2.5 points Content and format have less than 20% wrong or unclear parts.
Chapter 2	0.5	Each wrong output frame will get a minus point of 0.05
